

WANNA
ON A RIDE?
SURE KEN!

TALL TALE

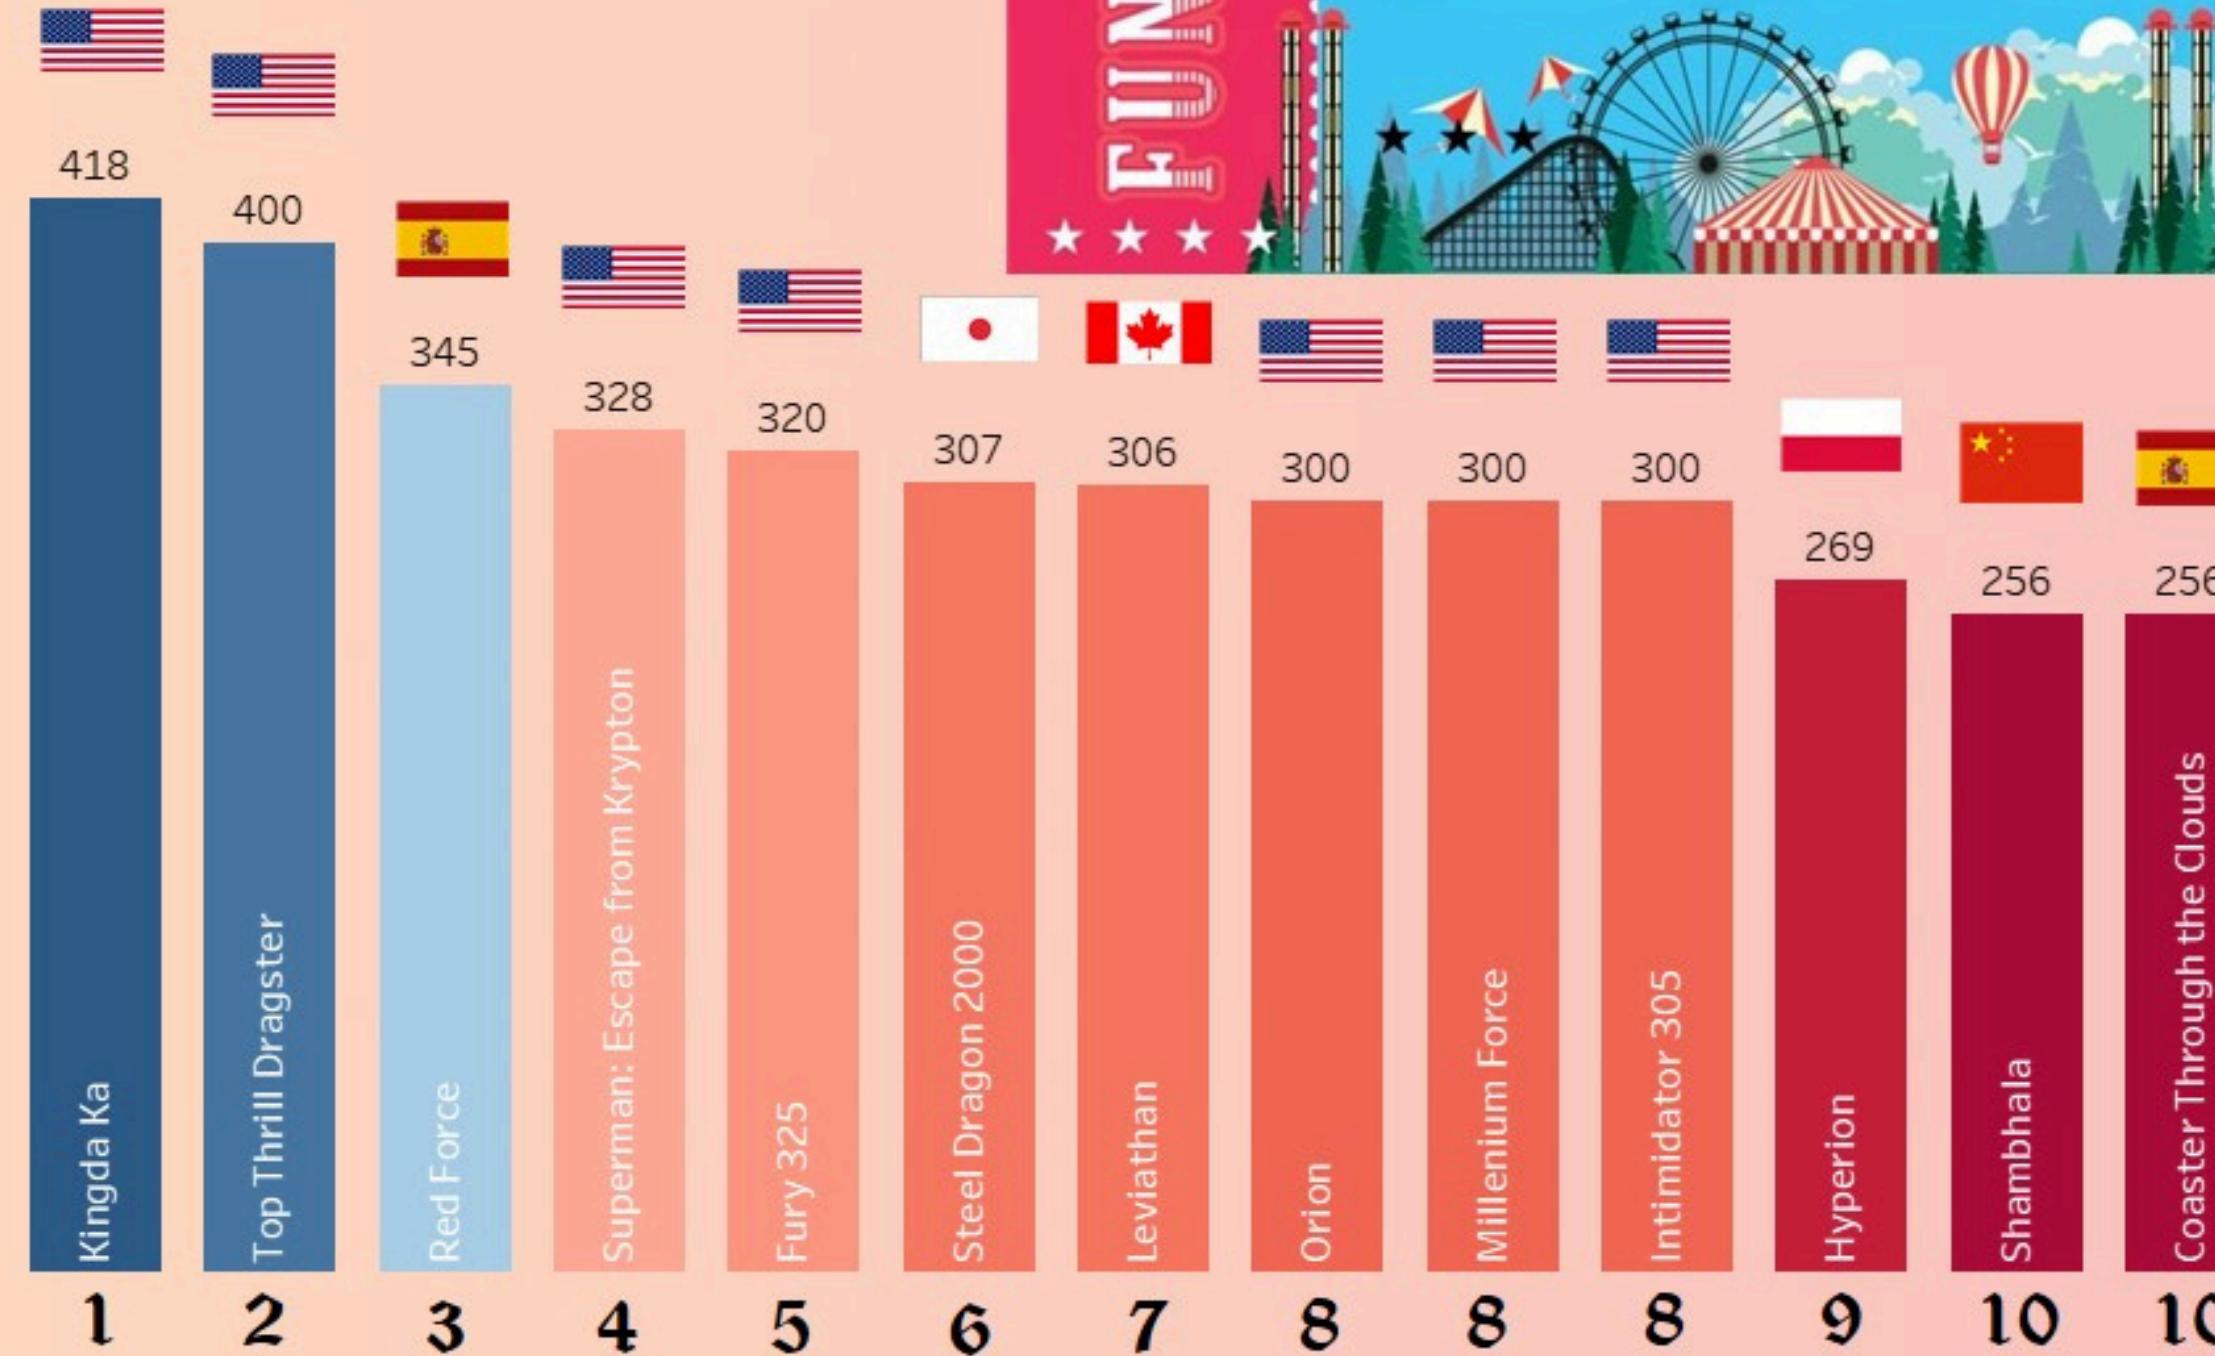

This presentation ranks the top 10 tallest roller coaster drops in the world and shows where these fear factories are located. We'll look at how tall these drops actually are, how they compare to each other, and which countries decided gravity was optional. Basically, it's a data-backed tour of rides that exist purely to make people scream.

FIRST RIDE THRILLS

WHAT THIS
RIDE IS
ABOUT:

10 Tallest roller coasters in the world

This presentation ranks the **top 10 tallest roller coaster drops in the world** and shows where these fear factories are located. We'll look at how tall these drops actually are, how they compare to each other, and which countries decided gravity was optional. Basically, it's a data-backed tour of rides that exist purely to make people scream.

NO COASTERS WERE RIDDEN DURING THIS ANALYSIS. FEAR WAS FELT ANYWAY.

RANDOM FACTS

HEIGHT??!!

Not all heights are created equal.
In roller coaster terms, total height and drop height
are two very different things.

For example, Kingda Ka is 456 ft tall, but the actual
stomach-dropping fall is 418 ft because the ride
doesn't fall straight from the very top.

Translation: It looks bigger than it is !

DROP??!!

139M [456 FT] 137M [449FT]

ENGINEERS REALLY LOOKED AT FAMOUS MONUMENTS
AND SAID, "YEAH, WE CAN DROP PEOPLE FROM THAT."

96M [316FT]

92M [305FT]

55M [179FT]

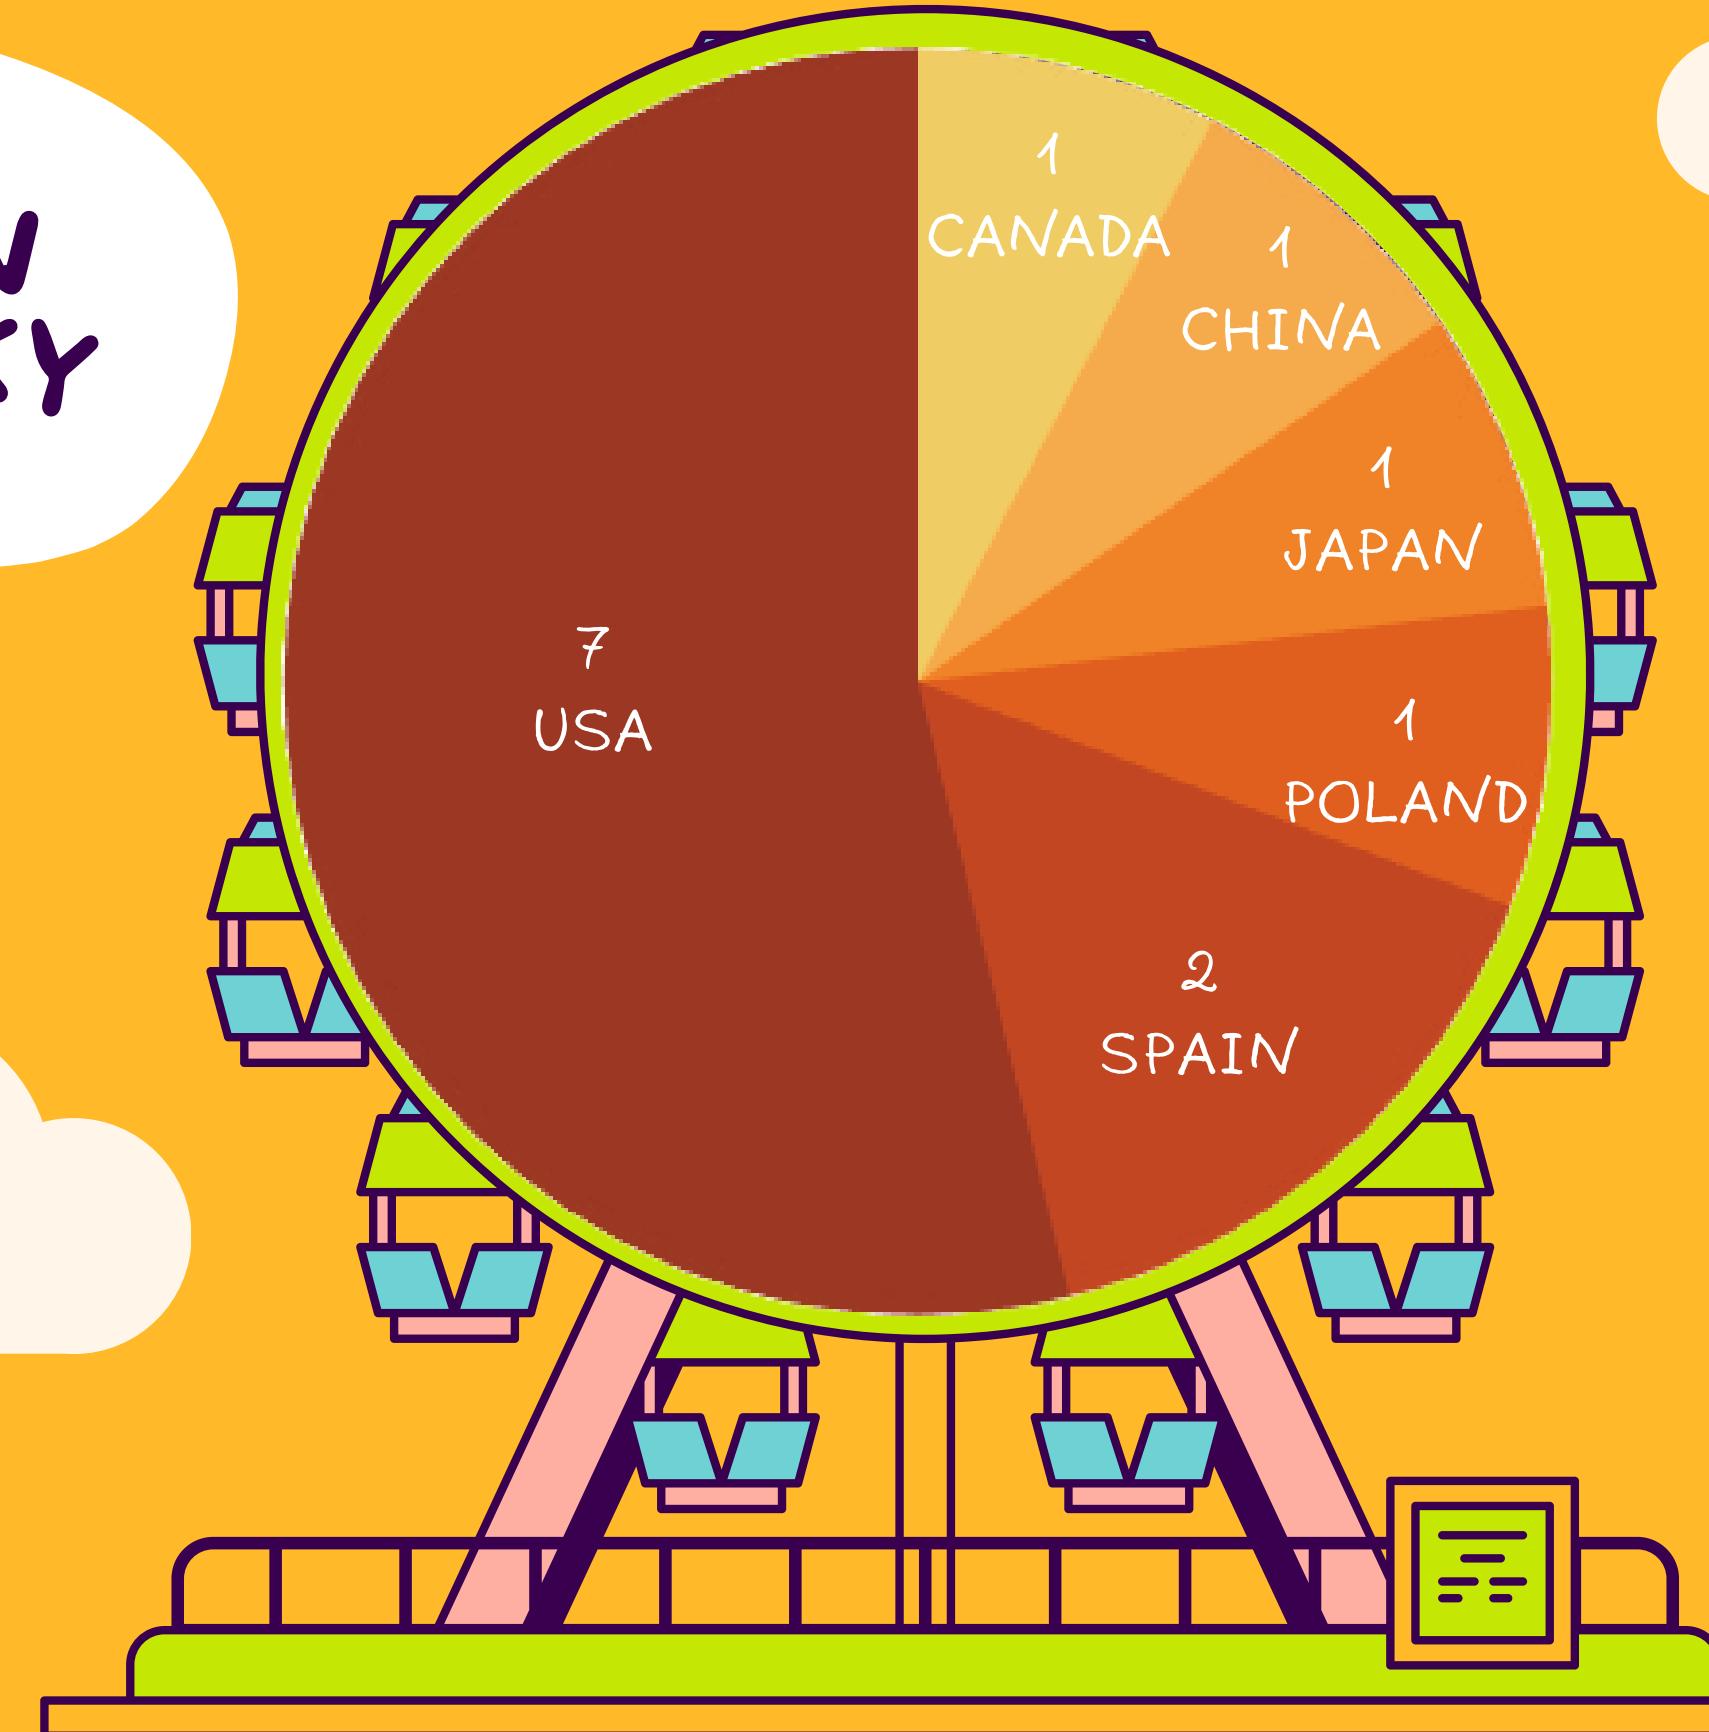

WHERE THE FEAR LIVES

UP IN
THE SKY

This pie chart shows where the world's tallest roller coaster drops are located.

A clear majority of the top 10 live in the United States. Apparently, the U.S. didn't just want roller coasters it wanted record-breaking anxiety.

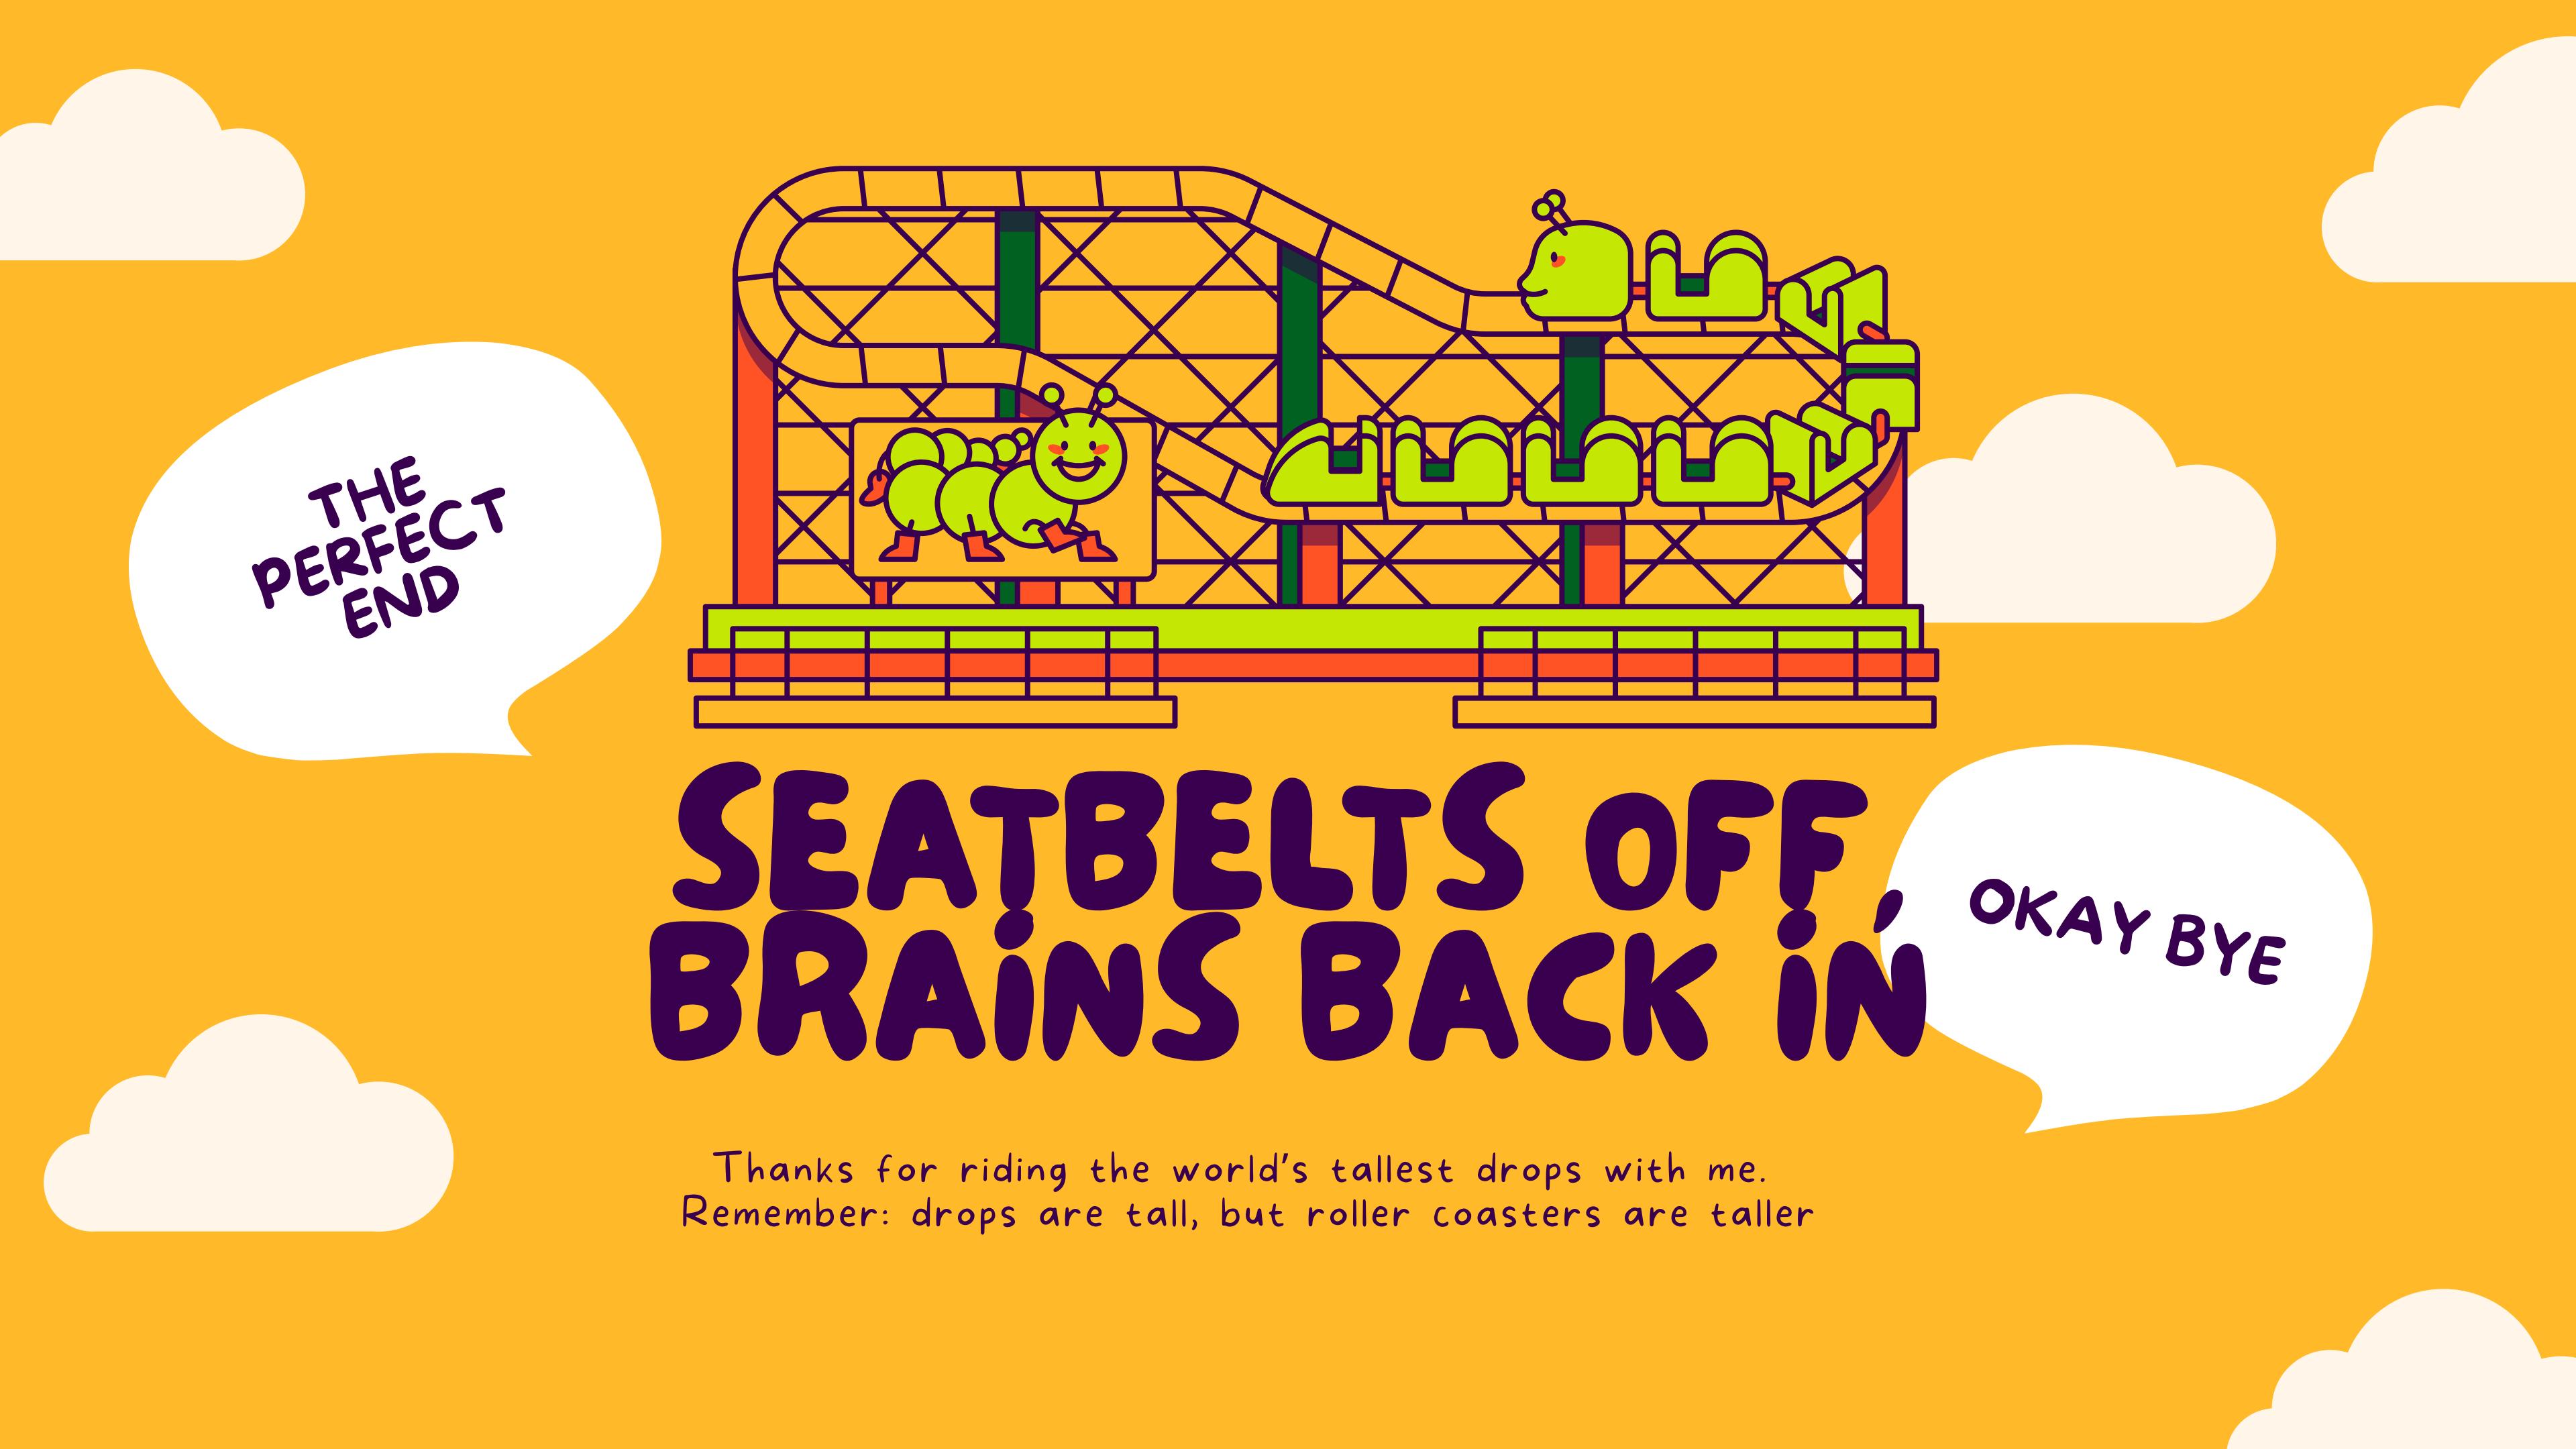

ARE WE MAKING PLANS GUYS ?

WHAT DID I LEARN?

- I actually enjoy making presentations... which is concerning.
- Roller coasters are very tall. Like, unnecessarily TALL.
- "Drop" and "height" are not the same thing (learned that the scary way).
- The USA is basically the global headquarters for extreme drops.
- Numbers are fine, but comparisons are what make things terrifying.

THE
PERFECT
END

OKAY BYE

SEATBELTS OFF, BRAINS BACK IN

Thanks for riding the world's tallest drops with me.
Remember: drops are tall, but roller coasters are taller
